

MEET YOUR FLOOD SENSOR

Flood sensors monitor flooding in your neighborhood. The information they collect is used by local residents, researchers, city agencies, and others to better understand how flooding impacts your community. They are not cameras and do not collect your identifying information.

ABOUT FLOODNET

FloodNet is a cooperative of communities, researchers, and New York City government agencies working to better understand the frequency, severity, and impacts of flooding in New York City, especially in neighborhoods that are vulnerable to high tides, storm surge, and stormwater runoff. Our data is available on our website.
