

2.0

Hazard History and Consequence Tool

What is the Hazard History and Consequence (HHC)?

- Enhancement to the Hazard Mitigation Plan (HMP)
 - Contains historical events and associated consequences
 - FEMA requirement to document the above
 - The HHC is frequently referenced in our HMP to establish that connection
- Central repository of when, where, and what happened in the city during past weather events
 - ~3,000 natural hazard events
 - Non-natural hazard events still in development
- Data examples
 - Localized, hourly weather information - meteorological data from over 40+ weather stations, 20+ tide gauges, 60+ flood sensors, radar imagery, and more
 - Data on 10 associated consequences (such as flood complaints, financial assistance, school closures, and transportation) from local, state, and federal government agencies
 - Media articles and scientific papers to provide more narrative information on the event

Weather Data

- NOAA Storm Events Database/NWS Significant Weather Events Archive
- Hourly weather data from automated surface observation stations around NYC (JFK/LGA/Central Park)
 - NYC Micronet and MADIS
- Archived radar imagery
- Tide Gauges – Stevens Institute of Technology – Flood Advisory System
- **Flood Sensors – FloodNet**
- Upcoming: NWS MRMS GRIB2 Radar Imagery

Not for public distribution. All charts and maps provided by NYC Emergency Management.

*the data above presents hourly rainfall amounts from PTC Ida (9/1/21 - 9/2/21).

Agency x Consequence

- Total Flood Assistance
- Total Individual Assistance
- Total Public Assistance

- Inland Flooding
- Tree Emergencies
- No Heat/Hot Water

- Peak Surge Level
- Weather Alerts

- School Attendance

- Beach Advisories

FEMA

Hazard vs Event Type

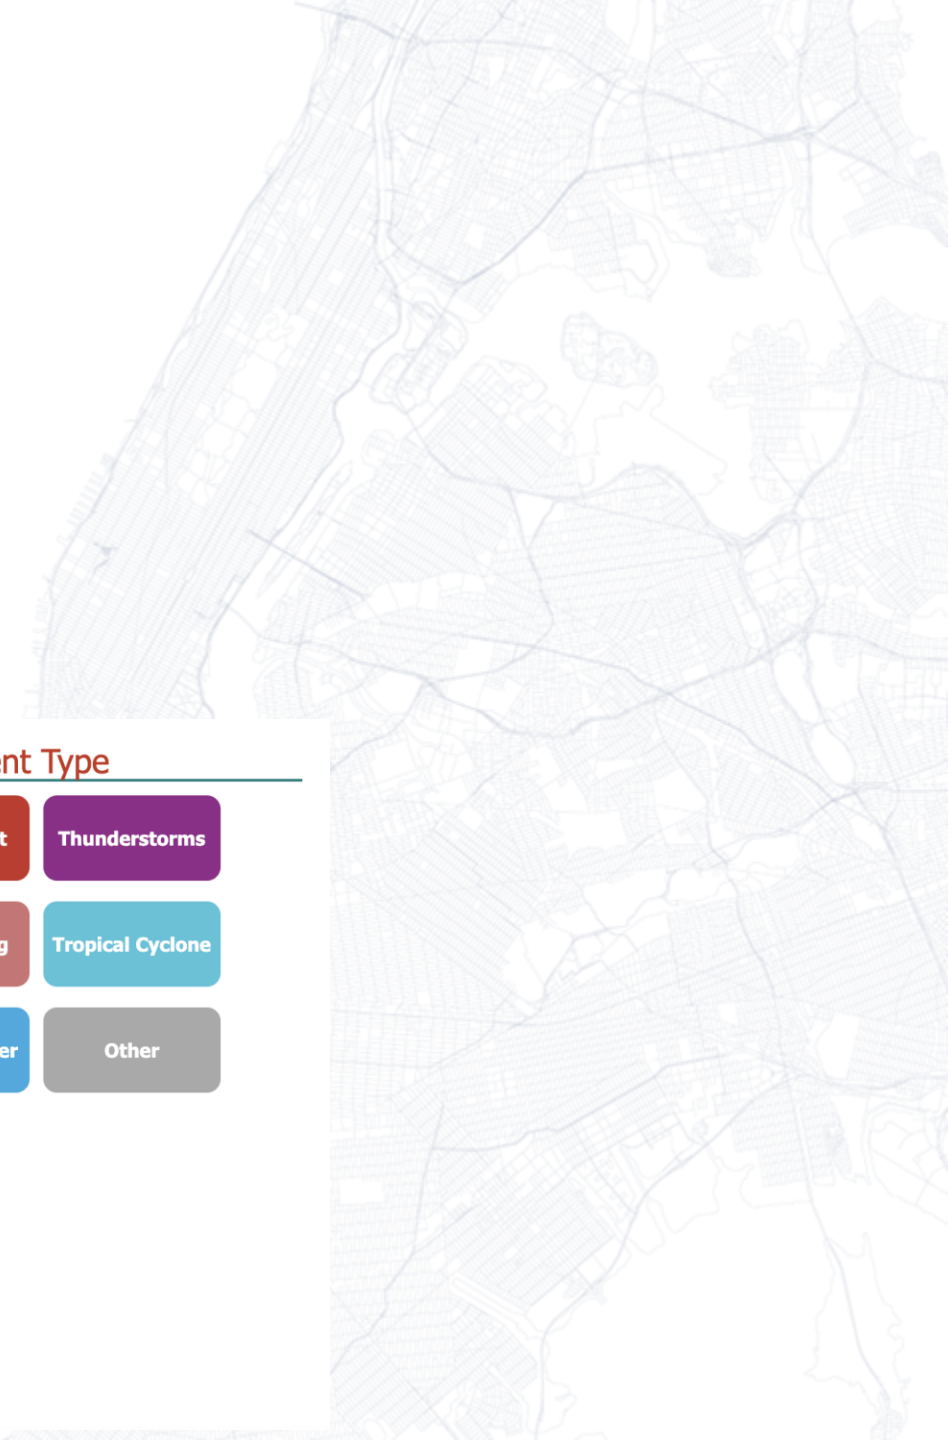

- Hazards occur during the events
 - Multiple hazards may occur during a given event
- Events are the bigger picture

Select HHC Hazard

Coastal Flooding	Drought	Earthquake	Extreme Cold
Extreme Heat	Fire	Flash Flooding	Freezing Precipitation
Heavy Snow	High Winds	Large Hail	Tornado
Wildfire			

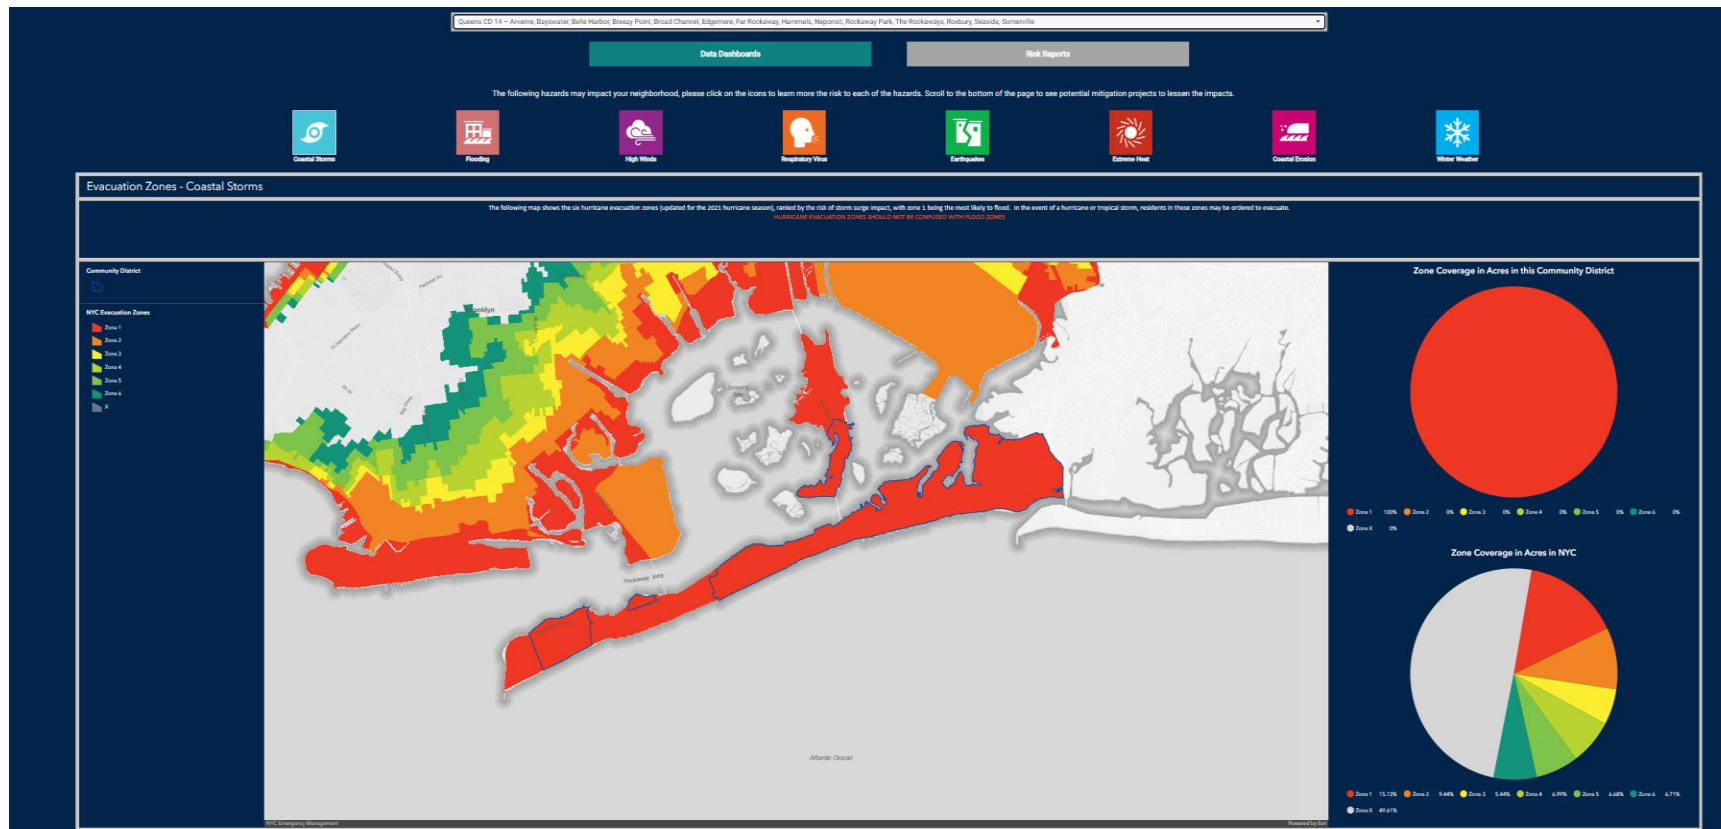

Select Event Type

Extreme Heat	Thunderstorms
Tidal Flooding	Tropical Cyclone
Winter Weather	Other

CRA Feature

- Community Risk Assessment Dashboard
 - <https://nychazardmitigation.com/cradashboard/>
- Analyze the impacts and trends of hazards in your community district

How can you use this tool?

- A comprehensive look at hazard events to aid in risk and vulnerability assessments
 - Single event or Aggregated events
- Captures NYC's historical losses to better inform benefit-cost analysis for grant justification
- Provides detailed sets of data and graphics to support scenario planning for training, exercises, or emergency management protocols
- Case Study Examples:
 - External agency consequence analysis reports
 - Grant application support
 - Raw data to justify programs and projects
 - Neighborhood analyses
 - Academic research support
 - Weather severity analysis

2.0 Features & Applications

Upcoming...

- Weather Severity Tool
- Creation of separate non-natural hazard profile
 - Including additional separate presentation of COVID-19
- Backend QA/QC for improved categorization and event association
- Future data collaborations with partners on consequence data
 - How can the tool be more useful for your group?
 - Do you have data to share or would like to see in the tool?
